

std::true_type

```
graph BT; A["playrho::IsMultipliable< T1, T2, std::void_t< decltype(T1{} *T2{})> >"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray box representing the base class `playrho::IsMultipliable` with its template parameters. A blue arrow points upwards from this box to a white box at the top representing the derived class `std::true_type`. Both boxes are divided into three horizontal sections.

playrho::IsMultipliable
< T1, T2, std::void_t
< decltype(T1{} *T2{})> >
