

std::false_type

```
graph BT; A[playrho::IsVector<typename>] --> B[std::false_type];
```

The diagram illustrates an inheritance relationship. At the bottom is a gray rectangular box representing the base class, labeled 'playrho::IsVector<typename>'. It is divided into three horizontal sections, with the text in the top section. Above it is a white rectangular box representing the derived class, labeled 'std::false_type'. It is also divided into three horizontal sections, with the text in the top section. A blue arrow points from the top edge of the gray box to the bottom edge of the white box, indicating that 'std::false_type' inherits from 'playrho::IsVector<typename>'.

playrho::IsVector<
typename >
