

std::true_type

```
graph BT; A["playrho::IsEqualityComparable< T1, T2, std::void_t< decltype (T1{}==T2{})> >"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a dark gray box containing the C++ code for `playrho::IsEqualityComparable`. A blue arrow points from the top of this box to a white box at the top containing `std::true_type`. The white box has two empty rectangular sections below the text, suggesting a class hierarchy or a template specialization.
