

std::false_type

```
graph BT; A[playrho::IsInequalityComparable < T1, T2, class >] --> B[std::false_type];
```

The diagram illustrates an inheritance relationship. At the bottom is a gray rectangular box representing the base class `playrho::IsInequalityComparable < T1, T2, class >`. It is divided into three horizontal sections, with the top section containing the class name. Above this box is a white rectangular box representing the derived class `std::false_type`. It is also divided into three horizontal sections, with the top section containing the class name. A blue arrow points from the top edge of the gray box to the bottom edge of the white box, indicating that `std::false_type` inherits from `playrho::IsInequalityComparable`.

playrho::IsInequalityComparable
< T1, T2, class >
